

# AFFORDABLE, SECURE, MULTI-TIERED DATA STORAGE

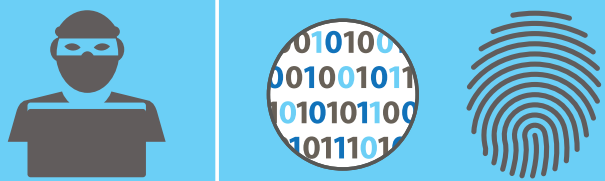

The smart way to manage your data lifecycle

If you're using a flat or insufficiently tiered hybrid or cloud data management strategy for all your data - or if you're still managing tape on your own - you're increasing your costs, security risk and business inefficiency.

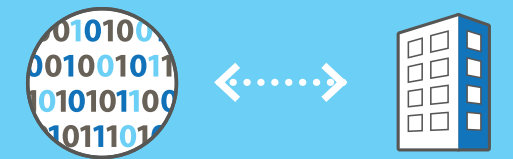

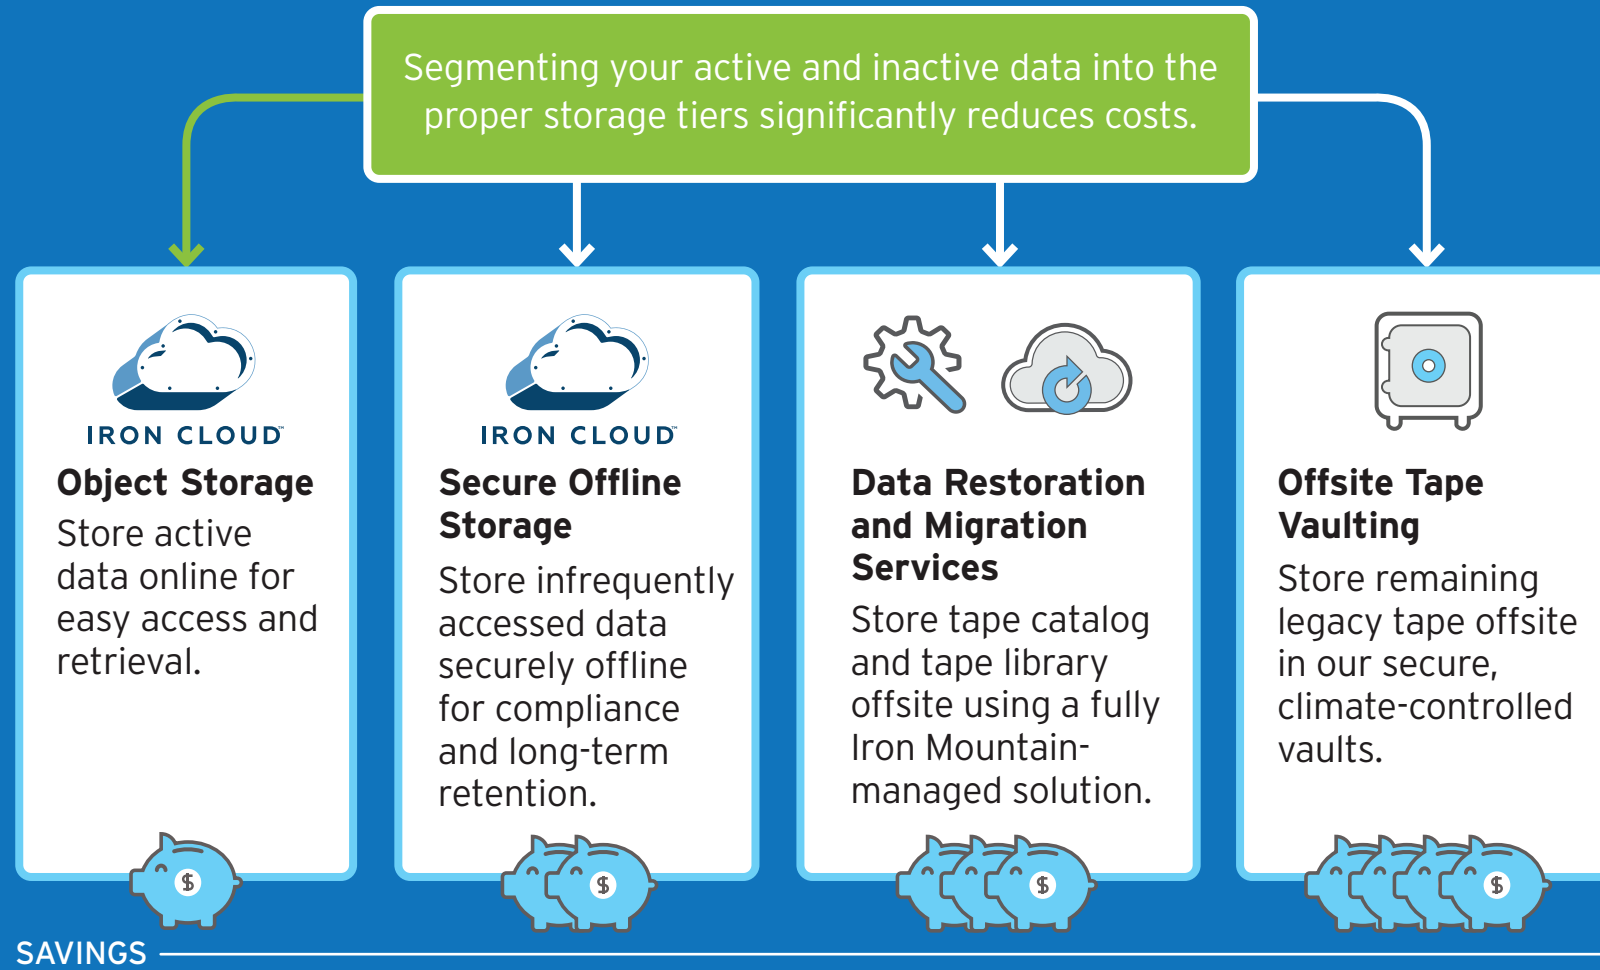

Tier your data storage with Iron Mountain. We're the only vendor that can help you manage your data throughout its entire lifecycle - active and inactive, online and offline.

Storing all your data in the same place or paying for on-site storage hardware and legacy backup infrastructure is costly.

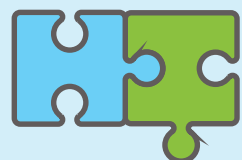

Increase security and protect against ransomware by air-gapping a gold copy of your data offline in our vaults, with multifactor authentication options.

Easily access, restore and retrieve your data whenever you need it.

Pay no egress fees.

Our solutions work with whatever technology you use.

Migrating to the right tier is easy.

And we'll manage everything going forward.
